

Control my Christmas lights with **YOUR** iPhone!

Download this **free** iPhone app from the Apple app store:

“**RFduino ColorWheel**”

QR app code shortcut →→→→→→

Open the app on your iPhone or iPad.

If my lights are on you can tap the “ToddFun” radio signal to connect to my lights:

Change my lights to any solid color by tapping anywhere on the color wheel or by selecting R,G,B color codes for Red, Green, Blue color levels on sliders.

Or - Pick from 25 saved display patterns “**I created myself**” by entering a number from 1 to 25 for the Red-R color code slider and enter 0 for Green-G and Blue-B sliders

Or - Enter all “0” zeros on R,G,B sliders to start a 4 minute demo of all 25 saved patterns. 10 seconds per pattern.

Tip: Instead of using the sliders it is easier to tap the number box on the right side to bring up your keypad and then enter a number.
